

Exercise 7

Task 1:

a) A Case is, in CBR technology, a problem situation. A case can be new, meaning unsolved, or past, meaning previously solved. The cases are stored in a problem-solution pair for easy accessibility.

b)

1. **Retrieve:** Previous knowledge is utilized in solving a new problem by retrieving a similar case to compare to the new problem.
2. **Reuse:** By reusing the knowledge learned from the previous case, we can create a suggested solution to our problem.
3. **Revise:** By testing the initial solution in a real life environment we can revise the solution, meaning to improve the solution of our problem.
4. **Retain:** After finding a final solution we can retain the valuable information we learned for solving future cases.

Task 2:

a) System: Automated customer support The task of the system is to resolve problems passed to the system by customers.
